LOCAL CONTROLS

S110.29 974in.lbs SMART MODULATING HIGH SPEED ACTUATOR

Overview: All BASIKS smart electric actuators have local controls as standard. An OLED screen and 3 positive push buttons create a user friendly interface for local control and a variety of adjustments. The screen is easy to read, with bright blue letters on a black background, and the use of the push buttons to adjust settings is intuitive. The local controls require power to be applied to the actuator to operate.

Local controls:

M button	M button is used to enter and switch menus (Hold for three seconds).
K2 button	K2 is used in conjunction with K3 for adjusting the actuator settings.
K3 button	K3 is used for changing settings, navigating menus, exiting and saving.
OLED Screen	OLED Screen with clear blue letters against a black background.

Standard local control function options:

- MANUAL CONTROL** The BASIKS smart actuator can be opened and closed using the K2 and K3 buttons (hold down K3 for three seconds to access).
- DEAD BAND** Adjusts the accuracy and sensitivity of the actuator.
- SPEED CONTROL** The working time can be increased either by setting a step timer (run/stop/run/stop), or continuous running by adjusting the PWM.
- CLOSED POSITION** The close position of the actuator can be adjusted by using the K2 and K3 buttons (zero adjustment).
- REVERSE ACTING** Actuator closes when an open signal is received, and vice versa.
- EXTEND ANGLE** Adjust the open position by adjusting the span of the actuator. Typically used to set 0-180 degree operation.
- SIGNAL LOSS** Sets one of three positions the actuator takes at loss of signal control.
- CURRENT ADJUST** Adjust the output current of the actuator.
